Report Overview

An Omnipolar Hall Sensor is a type of magnetic sensor that detects the presence and polarity of a magnetic field. Unlike a Unipolar Hall Sensor that responds to only one polarity of magnetic field, an Omnipolar Hall Sensor can detect both north and south magnetic poles. It utilizes the Hall effect, where a voltage is generated across a semiconductor material when exposed to a magnetic field. Omnipolar Hall Sensor is commonly used in various applications, such as automotive, consumer electronics, and industrial automation, where detection of both polarities of magnetic fields is required.
