## Abstracts

On-board Ethernet can not only support higher rate transmission, but also have large bandwidth, low delay and low electromagnetic interferenceDisturbance and other advantages, as well as the normalization of the link connection form, reduce the vehicle link type and cost, and can be widely used in entertainment, ADAS, Internet of Vehicles and other systems. Therefore, on-board Ethernet is expected to gradually replace the traditional bus technology and become the next generation of on-board network architecture.Ethernet circuit interface is mainly composed of data link layer (MAC) and physical layer (PHY). At present, most of the automotive processors have included MAC control, while Ethernet physical layer chip (PHY) is used as an independent chip to provide Ethernet access channel, which plays the role of connecting the processor and communication media.The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.

The global On-board Ethernet Physical Layer Chip market size was estimated at USD 814.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.00% during the forecast period.
