Report Overview

On-board Portable Emissions Measurement Systems (PEMS) are advanced, mobile devices designed to measure and analyze emissions from vehicles while they are in operation. These systems are typically installed directly onto the vehicle and are capable of capturing real-time data on various pollutants, such as nitrogen oxides (NO_x), carbon monoxide (CO), particulate matter (PM), and hydrocarbons (HC). PEMS are essential tools for assessing the environmental impact of vehicles, ensuring compliance with emission regulations, and aiding in the development of cleaner transportation technologies. They provide a comprehensive and accurate assessment of a vehicle's emissions profile under various driving conditions, which can include urban, highway, and off-road scenarios. This data is crucial for manufacturers to optimize engine performance and reduce harmful emissions, as well as for regulatory bodies to enforce emission standards and monitor the effectiveness of pollution control measures.
