Report Overview

The On Road Vehicle Engine Fire Suppression System is a safety device designed to automatically detect and extinguish fires in the engine compartments of on-road vehicles, such as cars, trucks, and buses. This system is crucial in preventing severe damage and potential loss of life due to engine fires. It typically consists of a network of sensors that monitor the engine's temperature and other parameters, a control unit that processes the data and determines if a fire is present, and a fire suppression agent, such as a clean agent or foam, which is released into the engine compartment to extinguish the fire. The system is engineered to be reliable, fast-acting, and safe, ensuring that fires are controlled before they escalate, thereby protecting the vehicle's occupants and reducing the risk of collateral damage.
