Report Overview

One-piece capsules, also known as seamless capsules or softgel capsules, are a type of oral dosage form used in pharmaceuticals, nutraceuticals, and cosmetics to encapsulate liquids, semi-solids, or suspensions. They are manufactured using a single-step process where the shell and the fill material are formed simultaneously, ensuring a tight seal and uniform dosage. These capsules are typically made from gelatin or plant-based materials like hydroxypropyl methylcellulose (HPMC) to cater to vegetarian or vegan preferences, and they offer advantages such as improved bioavailability, enhanced stability of sensitive ingredients, and ease of swallowing compared to traditional tablets or two-piece hard capsules. The market for one-piece capsules is driven by increasing demand for dietary supplements, rising preference for convenient drug delivery systems, and advancements in encapsulation technologies that allow for innovative formulations like sustained-release or taste-masked products. However, challenges include higher production costs and limitations in encapsulating certain types of fill materials. The industry is also seeing a shift toward plant-based and non-GMO alternatives to meet consumer demand for clean-label and sustainable products.
