### Report Overview

A One-shot Cephalostat is a specialized device used in radiographic imaging, particularly in orthodontics and craniofacial studies, to capture precise and standardized lateral or frontal X-ray images of the skull, known as cephalograms. The "one-shot" refers to the ability of the device to take the required image in a single exposure, ensuring that the patient's head is positioned consistently and accurately. The cephalostat typically includes adjustable ear rods and a forehead support to stabilize the patient's head, minimizing movement during the imaging process.
