Abstracts

Online Uninterruptible Power Supply is a precision power protection device that continuously monitors and switches between grid power and battery power, ensuring uninterrupted and stable power supply. This type of UPS converts AC power to DC power, charges the batteries, and then converts the DC power back to AC power through an inverter for use by the load. Regardless of the stability of grid power, online UPSs can provide high-quality, low-distortion AC power, and are widely used in environments where high-quality power is required, such as data centers, server rooms, and control rooms for precision instruments.
