Report Overview

The open face spray booth is a type of industrial or automotive painting system designed for efficient ventilation and overspray containment while allowing easy access for operators. Unlike enclosed booths, it features an open front or sides, relying on high-velocity airflow to capture paint particles and direct them toward exhaust filters, making it cost-effective for smaller operations or facilities with space constraints. These booths are commonly used in automotive refinishing, industrial coatings, and woodworking, offering flexibility for large or irregularly shaped items that may not fit in traditional enclosed booths. The design prioritizes airflow control, operator safety, and environmental compliance by minimizing particulate emissions, though it may require additional measures to maintain temperature and humidity control compared to fully enclosed systems.
