Report Overview

An Open Hose Reel is a mechanical device designed to manage and store hoses, particularly those used for water or other fluid applications. It is characterized by its open design, which allows for easy access to the hose and facilitates quick deployment and retrieval. The reel typically consists of a sturdy frame, a rotating drum or spool that winds and unwinds the hose, and a mechanism to lock the reel in place during use. This design is often used in industrial settings, construction sites, and for gardening purposes, where flexibility and mobility are required.
