Report Overview

Ophthalmic Biologics refers to a category of advanced therapeutic products designed to treat various eye conditions and diseases. These biologics leverage the power of biological molecules, such as proteins, antibodies, or growth factors, to target specific pathways or receptors within the eye. They are typically used for conditions where traditional small molecule drugs or surgical interventions are less effective or have limited success. Ophthalmic biologics can offer more precise treatment options, potentially reducing side effects and improving patient outcomes. Examples include treatments for age-related macular degeneration, diabetic retinopathy, and other retinal diseases. These products are subject to rigorous clinical trials and regulatory approval processes to ensure their safety and efficacy before they can be marketed and used in clinical practice.
