Abstracts

Optical Curve Profile Grinding Machine is a high-precision and high-performance machine tool for grinding curved surfaces. It plays a great role in precision grinding. Form grinding on an optical curve grinder uses an optical projection amplification system to enlarge the image of the workpiece onto the screen, and compare it with the enlarged image of the workpiece clamped on the screen. During processing, the grinding wheel is used to grind the workpiece, and the workpiece will cross the drawing line. The remaining parts are rubbed away until the contours of the object are all coincident.

The global Optical Curve Profile Grinding Machine market size was estimated at USD 148.65 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
