Abstracts

Photomasks are important components used in the manufacturing process of integrated circuits such as LSI. A very fine circuit pattern is etched on the light-shielding film on the surface of a transparent glass plate, which becomes the original plate for replicating the circuit on a silicon wafer. The pattern on the photomask is reduced and projected onto a silicon wafer to form a fine pattern. This article studies photomask products used for optoelectronic devices including light-emitting diodes (LEDs), photodiodes (PINs), avalanche photodiodes (APDs), sensitive devices, and some special discrete devices. The global photomask market is dominated by companies from Japan, South Korea and Taiwan. The market concentration of optoelectronic device masks is high and oligopoly is serious. Photronics, DNP and Toppan account for more than 80% of the market share. China's semiconductor industry is accelerating its domestic substitution efforts, and the growth rate of China's photomasks is higher than the global average.

The global Optoelectronic Devices Photomask market size was estimated at USD 890.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Optoelectronic Devices Photomask market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
