Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Oral Glass Ionomer Filling Material competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Oral glass ionomer filling material is a dental restorative material generated by the reaction of aluminosilicate glass powder and polyacrylic acid aqueous solution. It has the characteristics of chemical adhesion, biocompatibility and slow release of fluoride ions. After curing, it can form ionic bonds with tooth tissue and is suitable for filling caries, cavity lining and repairing deciduous teeth. It is especially known for its caries prevention, easy operation and mild pulp stimulation, but its mechanical strength is low, and its performance is often improved through resin modification or high viscosity formula. Oral glass ionomer filling materials have broad application prospects in the field of dental restoration due to their excellent biocompatibility, fluoride release and anti-caries properties, and chemical bonding properties with the tooth body. With the advancement of materials science, new resin-modified glass ionomers and high-strength glass ionomers have further improved their mechanical properties and durability, making them the preferred choice in pediatric dentistry, non-load-bearing area restorations, and minimally invasive treatments. In the future, with the intensification of aging and the popularization of the concept of minimally invasive dentistry, the application of glass ionomer materials in root caries, transitional restorations, and patients with high caries risk will continue to expand. At the same time, the integration of nanotechnology and bioactive ingredients may promote their development in the direction of intelligence and functionality, becoming a comprehensive material with both therapeutic and restorative potential.

The global Oral Glass Ionomer Filling Material market size was estimated at USD

1523.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
