Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Orbital Hydraulic Motor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The orbital hydraulic motor is a low-speed, high-torque hydraulic actuator based on the principle of planetary meshing. Its core structure consists of a fixed internal gear stator and an eccentric roller rotor. The hydraulic oil drives the rotor to perform planetary orbital motion in the inner cavity of the stator, and the eccentric shaft converts the swing into continuous rotation output torque. Danfoss (Denmark) and Parker (USA) and other companies monopolize the high-end market, and domestic companies are actively deploying and exploring overseas markets. Companies continue to enrich the product line of Orbital Hydraulic Motor and launch products of different specifications, different powers and different functions to meet the needs of different industries and customers.">As an efficient hydraulic drive device, Orbital Hydraulic Motor has the characteristics of compact structure, large output torque and high energy conversion efficiency. With the accelerated advancement of global infrastructure construction and the improvement of industrial automation level, the market demand for Orbital Hydraulic Motor continues to grow.
