Report Overview

Phosphorus flame retardants for plastics are a class of chemical compounds that are specifically designed to enhance the fire resistance and safety of plastic materials. These retardants contain phosphorus, a chemical element known for its ability to disrupt the combustion process. When incorporated into plastics, they work by promoting char formation, which acts as a barrier to heat and oxygen, thereby slowing down or preventing the spread of fire. Phosphorus flame retardants can be added to various types of plastics, such as polyvinyl chloride (PVC), polyurethane, and polyethylene, to meet specific flammability standards and regulations. They are widely used in industries where fire safety is a critical concern, such as construction, electronics, and automotive, to protect both people and property from the devastating effects of fires.
