## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Orthodontic Invisible Braces competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Orthodontic Invisible Braces has revolutionized orthodontic treatment, allowing patients to transform your smile discreetly and comfortably. It uses a series of virtually invisible custom-made aligners to gradually straighten teeth without the need for metal wires or brackets. Clear-Aligner Treatment is orthodontic devices that are a transparent, plastic form of dental braces used to adjust teeth. In 2024, global Orthodontic Invisible Braces production reached approximately 6798.93 k units, with an average global market price of around US\$ 1152.4 per unit. Orthodontic Invisible Braces emerged in the United States and developed rapidly in Europe and the United States. For a long time before, North America and Europe were the first and second largest markets for clear aligners. This is mainly because the local economy is relatively developed, and consumers have the ability to spend with hospitals for orthodontics. At the same time, the clear aligner also improves comfort and aesthetics, which in a certain sense promotes the development of the orthodontic industry. It is foreseeable that Asia and Latin America represented by China will become the main driving force for the future development of clear aligners. The number of local orthodontists has gradually increased. At the same time, in response to the rapid economic development, consumers are willing to pay for orthodontic consumption. In addition, traditional braces also have inherent shortcomings such as long cycle and poor comfort. In other words, clear aligners have relatively large advantages. Adult segment accounted for the largest revenue share over 91.34% in 2024. Dental diseases such as malocclusion are widespread in the population, in addition to affecting the quality of life, it may also lead to impaired dental esthetics, oral dysfunction such as chewing, swallowing and

speaking, and increased susceptibility to trauma and periodontal disease. Today, acceptable aesthetic appearance, including the appearance of teeth, plays a vital role in society. In the teenage population, there is a growing concern about the appearance of teeth. Orthodontic treatment is one of the fastest growing areas in orthodontics, with patients seeing aligners as a more comfortable, convenient and discreet alternative to fixed aligners. The adolescent segment is expected to witness the highest growth over the forecast period. To date, more than 1 million adolescents have started orthodontic treatment with clear appliances.

The global Orthodontic Invisible Braces market size was estimated at USD 7835.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.00% during the forecast period.
