Report Overview

Orthodontic wire, also known as archwire, is a thin, flexible wire used in orthodontic treatment to straighten and align teeth. It is typically made from materials such as stainless steel, nickel-titanium, or beta-titanium, which possess the necessary strength and flexibility to apply gentle, continuous pressure on teeth. The wire is bent and shaped by orthodontists to fit the specific dental arch of a patient, and it is secured to brackets or other orthodontic appliances attached to the teeth. Over time, as the wire exerts force, it gradually moves the teeth into the desired position, improving both function and aesthetics.
