### Report Overview

Osteoporosis injections are biologic or synthetic medications administered via subcutaneous or intravenous routes to treat or prevent osteoporosis by inhibiting bone resorption or promoting bone formation. These injections, such as denosumab (Prolia, Xgeva), teriparatide (Forteo), abaloparatide (Tymlos), and romosozumab (Evenity), offer advantages over oral treatments, including better compliance, higher bioavailability, and targeted action on bone metabolism. The market is driven by the rising global prevalence of osteoporosis, particularly among aging populations and postmenopausal women, along with increasing awareness of advanced treatment options. However, challenges include high costs, potential side effects like hypocalcemia or osteonecrosis of the jaw, and stringent regulatory requirements. Key players include Amgen, Eli Lilly, Radius Health, and UCB, with ongoing R&D focused on improving efficacy and reducing dosing frequency. The market is segmented by drug type, administration route, distribution channel (hospitals, specialty clinics, retail pharmacies), and region, with North America and Europe leading due to robust healthcare infrastructure and higher treatment adoption. Emerging markets in Asia-Pacific are expected to grow rapidly due to improving healthcare access and rising geriatric populations. Future trends include biosimilars, personalized medicine, and combination therapies to enhance patient outcomes.
