Abstracts

A biocide is a chemical treatment that is formulated to effectively control microbial growth. Problems caused by un-controlled microbial growth can range from health hazards, the breakdown of chemicals, the development of biofilms, heat transfer losses, restriction of flow and under deposit corrosion. Oxidising biocides attack microorganisms by oxidising (an electron transfer reaction) the cell structure, disrupting nutrients from passing across the cell wall. An oxidizing agent like chlorine pulls electrons in; meanwhile, the bacteria it is attacking loses electrons.

The global Oxidizing Biocides For Water Treatment market size was estimated at USD 1280.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
