Report Overview

Pangasius compound feed is a specialized aquaculture feed formulated to meet the nutritional requirements of Pangasius catfish, a key species in the global seafood industry. This feed typically contains a balanced mix of proteins, fats, carbohydrates, vitamins, and minerals to support optimal growth, health, and feed conversion efficiency in Pangasius farming. The composition often includes fishmeal, soybean meal, rice bran, and other plant-based ingredients, with some formulations incorporating additives like probiotics or enzymes to enhance digestion and disease resistance. The demand for Pangasius compound feed is closely tied to the expansion of intensive and semi-intensive Pangasius farming, particularly in major producing countries such as Vietnam, India, Bangladesh, and Indonesia. As Pangasius production continues to grow due to its affordability and high global demand, the feed market is expected to rise in tandem, driven by the need for cost-effective, sustainable, and high-performance feed solutions. Additionally, regulatory pressures and consumer preferences for responsibly sourced seafood are pushing feed manufacturers to innovate with eco-friendly and traceable ingredients. Competition in this market is intensifying, with both local and international feed producers vying for market share by improving product quality, pricing strategies, and supply chain efficiency.
