Report Overview

A Paper-Based Biofuel Cell (PBBC) is an innovative, eco-friendly energy generation system that utilizes paper as the primary component of its structure. This type of biofuel cell integrates microfluidic channels and electrodes onto a paper substrate, which serves as both the support and the medium for the flow of fluids. The PBBC operates by converting chemical energy from organic compounds, such as glucose or other biofuels, into electrical energy through electrochemical reactions at the electrodes. The paper's porous nature facilitates the transport of ions and electrons, while its flexibility and low cost make it an attractive option for disposable or portable power sources. Applications of PBBCs range from small-scale sensors to medical devices, demonstrating their potential for sustainable and efficient energy solutions.
