Report Overview

Paper and cardboard for pharmaceutical packaging refer to high-quality, specialized materials used in the production of packaging for pharmaceutical products. These materials are specifically designed to meet stringent industry standards and regulations, ensuring the safety, efficacy, and integrity of the packaged medications. They are typically made from virgin fibers, which are free from contaminants and additives that could potentially interact with the pharmaceutical products. The paper and cardboard used in pharmaceutical packaging must possess excellent barrier properties to protect the contents from moisture, light, and oxygen, which could otherwise degrade the medication.
