Report Overview

Papermaking starches are modified or unmodified starches derived from sources such as corn, potato, tapioca, or wheat, used in the paper manufacturing process to enhance strength, surface smoothness, and printability while improving retention of fillers and fibers. These starches are applied at various stages, including wet-end addition, surface sizing, and coating, to optimize paper quality and production efficiency. The demand for papermaking starches is closely tied to the paper and packaging industry, with growth driven by increasing packaging needs due to e-commerce expansion, sustainable packaging trends, and the rising use of recycled paper, which often requires additional starch for fiber bonding. However, the market faces challenges from digitalization reducing demand for graphic paper and fluctuating raw material prices. Regional dynamics vary, with Asia-Pacific leading growth due to expanding paper production in countries like China and India, while mature markets in North America and Europe focus on high-performance and eco-friendly starch solutions. Innovations in bio-based and modified starches, along with stringent environmental regulations promoting biodegradable additives, are shaping the industry's future. Key players include Cargill, Ingredion, Tate & Lyle, and Roquette, who are investing in R&D and sustainable starch solutions to meet evolving industry demands.
