Report Overview

A Parallel Mechanical Gripper is a type of robotic end-effector designed to grasp and manipulate objects with precision. It operates on the principle of parallel kinematics, where multiple fingers or arms work in concert to securely hold an object from various angles. This design allows for a more stable and controlled grip, especially when dealing with objects of varying shapes and sizes. The gripper typically consists of a base, multiple parallel fingers, and a control system that coordinates the movement of these fingers. It is often equipped with sensors to monitor grip force and position, enabling it to adapt to different tasks and ensure a secure hold without causing damage to the object. Parallel Mechanical Grippers are widely used in industries such as manufacturing, assembly, and packaging, where precise and reliable object handling is crucial.
