Abstracts

The passive terahertz security detector is a device for safety inspection of the human body. It has the characteristics of non-contact, real-time inspection, and no violation of human privacy. It can detect guns, knives, explosives, drugs and other contraband hidden under clothes in real time. Detect contraband, determine its location and call the police in time. The passive terahertz security detector itself does not emit any rays or energy, and uses the difference between the terahertz waves generated by the object and the human body itself and reflected in the environment for comparative imaging. The theoretical basis is Planck's black body radiation law.
