Report Overview

A Passive Video Transmitter is a specialized electronic device designed to facilitate the wireless transmission of video signals from a camera or other video source to a receiver. It operates by converting the video signal into a format suitable for wireless transmission, typically using radio frequency (RF) technology. This device does not require an external power source, as it draws power directly from the video signal it is transmitting, hence the term "passive." It is often used in security systems, surveillance, and remote monitoring applications where running wires is impractical or undesirable. The Passive Video Transmitter ensures that the video feed remains secure and stable, with minimal signal degradation, over a certain range, depending on the transmitter's power output and the receiver's sensitivity. It is an essential component in maintaining the integrity and reliability of wireless video communication systems.
