A PDMS is a computer-based information system which facilitates the collection, integration, retrieval and interpretation of the multi-source (e.g. hospital information system, laboratory system, bedside devices) multi-variant (e.g. images, numbers, text) data found in intensive care units. A PDMS is considered a medical product performing calculations or interpretations of patient-specific data for diagnostic or therapeutic purposes, e.g. dosage of medication. PDM systems can support clinicians in their everyday work, in a way that is not possible with paper-based documentation. If a PDMS has not been certified as a medical product, physicians and nurses must use the original data source every time they take a therapeutic decision. Global Patient Data Management Systems (PDMS) key players include Philips Healthcare, GE Healthcare, Siemens Healthineers, Dräger, etc. Global top four manufacturers hold a share about 50%. North America is the largest market, with a share over 60%, followed by Asia-Pacific and Europe, both have a share about 30 percent. In terms of product, Single Function System is the largest segment, with a share over 60%. And in terms of application, the largest application is ICUs, followed by General Ward.

The global Patient Data Management Software market size was estimated at USD 1061.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
