### Report Overview

PDLC (Polymer Dispersed Liquid Crystal) Switchable Glass is a high-tech, innovative glass product that combines the properties of traditional glass with the ability to control light transmission and privacy. This smart glass is composed of a liquid crystal solution dispersed within a polymer matrix, sandwiched between two layers of glass or other transparent substrates. When an electric current is applied, the liquid crystal molecules align, allowing light to pass through the glass, making it clear and transparent. Conversely, when the current is turned off, the molecules scatter, causing the glass to become opaque and frosted, effectively blocking light and providing privacy. PDLC Switchable Glass is widely used in various applications, such as architectural windows, conference rooms, and residential settings, offering users the flexibility to control the level of transparency and privacy as needed.
