Report Overview

PDO Threads for Face Lift is a cosmetic procedure that utilizes Polydioxanone (PDO) threads, which are biodegradable sutures made from a synthetic polymer. These threads are strategically inserted into the facial skin to stimulate collagen production and elastin regeneration, thereby providing a lifting effect to sagging skin. PDO threads are designed to be absorbed by the body over time, typically within 4-6 months, but their effects can last up to two years. This non-surgical treatment aims to improve skin elasticity, reduce wrinkles, and enhance facial contours, offering a more youthful and rejuvenated appearance. It is often used to address issues such as loose skin, jowls, and nasolabial folds, and is considered a minimally invasive alternative to traditional facelift surgery.
