Report Overview

PE Coated Release Paper is a specialized type of paper product designed for applications where controlled release of adhesive or other substances is required. It is characterized by a thin layer of polyethylene (PE) coating applied to one or both sides of a paper substrate. This coating serves as a barrier that allows for easy separation of layers, making it ideal for use in various industries such as food packaging, label production, and adhesive tapes. The PE coating provides a non-stick surface, which can be tailored to have varying levels of release properties depending on the specific application. The paper base can be made from different types of paper, such as wood pulp or synthetic fibers, to achieve the desired strength and durability. PE Coated Release Paper is valued for its ability to resist moisture, chemicals, and provide a consistent release performance, which is crucial in maintaining the quality and functionality of products that rely on adhesive bonding.
