Report Overview

PEEK-coated optical fiber refers to optical fibers with a protective outer layer made from polyether ether ketone (PEEK), a high-performance thermoplastic known for its exceptional mechanical strength, thermal stability (withstanding temperatures up to 260°C), chemical resistance, and low smoke emission. This coating enhances durability in harsh environments, making it ideal for applications in aerospace, oil & gas, medical devices, and industrial automation, where traditional polymer coatings (e.g., acrylate) may fail. The PEEK layer provides superior abrasion resistance and maintains signal integrity under extreme conditions, though its higher cost compared to standard coatings limits adoption to niche, high-value sectors demanding reliability. The market is driven by increasing demand for robust fiber optics in extreme operational settings, though material and processing expenses pose growth challenges.
