Abstracts

PEEK (Polyether Ether Ketone) cranial and craniofacial implants are advanced medical devices used to repair or reconstruct cranial and facial bone defects resulting from trauma, surgery, or congenital conditions. PEEK is a biocompatible, radiolucent, and highly durable polymer that can be precisely shaped and customized to fit the patient's anatomy. These implants offer several advantages, including lightweight properties, high mechanical strength, and resistance to wear and chemical degradation, making them suitable for long-term implantation. Additionally, PEEK implants do not interfere with imaging techniques like MRI or CT scans, allowing for clear post-operative assessments. Their customizable nature ensures a better fit and integration with the patient's bone structure, enhancing both functional and aesthetic outcomes in cranial and craniofacial surgeries.

The global Peek Cranial And Craniofacial Implants market size was estimated at USD 118.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
