Report Overview

The PEEK Interbody Fusion Cage is a medical device primarily used in spinal surgeries, specifically for interbody fusion procedures. Made from Polyetheretherketone (PEEK), a biocompatible and radiolucent polymer, this device serves as an implant to support and maintain the space between adjacent vertebrae. The primary function of the PEEK Interbody Fusion Cage is to facilitate the fusion of the vertebrae, promoting stability and reducing pain in patients suffering from various spinal disorders such as degenerative disc disease, spondylolisthesis, or after a traumatic injury. The cage is designed to be filled with bone graft material, which encourages bone growth across the fusion site, leading to a solid arthrodesis. Its radiolucent property allows for clear imaging of the spinal structure during postoperative assessments without interference from the implant material.
