Report Overview

Peelable Ink for PCB, also known as Peelable Solder Mask, is a specialized type of ink used in the manufacturing process of Printed Circuit Boards (PCBs). This ink is applied to the PCB surface to protect the copper traces and pads from oxidation, physical damage, and environmental factors. The key feature of Peelable Ink is its temporary nature; it can be easily removed after the PCB assembly process, such as during rework or repair, without causing damage to the underlying copper or other components. This ink is typically made from a blend of polymers and solvents that provide a robust, yet removable, protective layer. The removal process can be done using various methods, such as peeling, scraping, or chemical dissolution, depending on the specific formulation of the ink. Peelable Ink for PCB is crucial for maintaining the integrity and functionality of electronic devices, especially in scenarios where components need to be replaced or the board needs to be modified post-manufacturing.
