### Report Overview

PEG-200 Glyceryl Stearate is a nonionic surfactant and emulsifier commonly used in cosmetics, personal care, and pharmaceutical formulations. It is derived from the esterification of glycerin and stearic acid, modified with polyethylene glycol (PEG-200), which enhances its water solubility and stability in formulations. This ingredient functions as an effective emollient, thickener, and stabilizer, often found in creams, lotions, and conditioners due to its ability to improve texture, spreadability, and moisture retention. Its mildness makes it suitable for sensitive skin applications, while its compatibility with a wide range of ingredients ensures versatility in product development. The demand for PEG-200 Glyceryl Stearate is driven by the growing personal care industry, particularly in natural and organic formulations, though regulatory scrutiny over PEG compounds in certain regions may influence market dynamics.
