Abstracts

Pellets for horse bedding are compressed wood or paper pellets used as an alternative to traditional bedding materials such as straw or shavings in horse stalls. These pellets are typically made from recycled wood or paper products and are manufactured to be highly absorbent and low-dust. The process of creating pellets involves compressing raw materials into small, dense pellets that expand when exposed to moisture. When used as bedding, the pellets absorb moisture such as urine, expanding and forming a soft, absorbent layer that helps keep the stall dry and clean. This can be particularly beneficial for horse owners looking to minimize dust and allergens in the stable environment.

The global Pellets for Horse Bedding market size was estimated at USD 125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
