Report Overview

A Pendulum Hardness Tester is a specialized mechanical device designed to measure the hardness of materials, particularly metals and alloys, by utilizing the principle of pendulum impact. This tester operates by releasing a pendulum with a specified weight and geometry, which swings and impacts the test sample. The extent of the pendulum's swing after impact is then measured, and this value is directly correlated to the hardness of the material. The Pendulum Hardness Tester is widely used in quality control and material characterization, providing a quick and reliable assessment of material hardness without causing significant damage to the test piece. It is particularly useful for measuring the hardness of large or irregularly shaped objects where other hardness testing methods may be impractical or destructive.
