Report Overview

Pentoxifylline API, or Active Pharmaceutical Ingredient, refers to the pure chemical substance that serves as the primary therapeutic component in the medication Pentoxifylline. Pentoxifylline is a vasodilator and a central nervous system stimulant, which is primarily used to treat intermittent claudication, a condition characterized by pain in the legs due to reduced blood flow. The API of Pentoxifylline is a white or almost white powder with a bitter taste. It is a synthetic xanthine derivative that works by improving blood flow in the peripheral arteries, reducing blood viscosity, and enhancing the flexibility of red blood cells. This allows for better oxygen delivery to the tissues, thus alleviating symptoms associated with poor circulation. The API is the starting point for the manufacturing of Pentoxifylline tablets or other pharmaceutical dosage forms, and its quality and purity are critical to the safety and efficacy of the final product.
