## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Peripherally Inserted Central Catheter (PICC Line) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Peripherally Inserted Central Catheter (PICC) is a long, flexible tube that is inserted into a peripheral vein—typically in the upper arm—and then advanced through the venous system until its tip is positioned in a large central vein, usually near the heart (in the superior vena cava). This type of catheter is used to provide long-term intravenous (IV) access for administering medications, fluids, nutrition, or for drawing blood, especially in patients requiring extended treatment. It offers a less invasive alternative compared to other central venous catheters and can remain in place for weeks to months, provided that it is properly maintained and monitored for potential complications such as infection or thrombosis. The global Peripherally Inserted Central Catheter (PICC) market is witnessing steady growth across key regions, including North America, Europe, Asia-Pacific, Latin America, and the Middle East & Africa. North America remains a primary driver, propelled by advanced healthcare infrastructure, widespread adoption of innovative vascular access devices, and supportive reimbursement frameworks. Europe follows closely, with growing emphasis on outpatient and home care solutions. Meanwhile, Asia-Pacific is emerging as a high-potential region due to expanding healthcare investments, a large patient pool with chronic diseases, and rising demand for minimally invasive procedures. Latin America and the Middle East & Africa, though smaller in market share, exhibit growing interest in PICC adoption as healthcare standards improve. Several prominent medical device companies drive competition in the PICC market, offering diverse product portfolios and technological innovations. Established

players such as BD (Becton, Dickinson and Company), Teleflex, B. Braun, and AngioDynamics often focus on valve-based catheters and advanced material coatings. Meanwhile, mid-sized and emerging manufacturers concentrate on cost-effective open-end PICCs or specialized pediatric lines. Intense rivalry stems from the demand for enhanced safety features, infection control, and clinician-friendly insertion techniques. Continuous R&D investments and strategic partnerships or acquisitions are common as companies aim to strengthen their market positions and expand their global footprints.

The global Peripherally Inserted Central Catheter (PICC Line) market size was estimated at USD 565.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
