### Report Overview

Peritoneal non-woven fabric is a specialized medical-grade material designed for use in peritoneal dialysis, a treatment for patients with kidney failure. This fabric is engineered to be highly breathable, sterile, and biocompatible, ensuring it meets stringent medical standards for safety and performance. It acts as a critical component in dialysis kits, often serving as a protective layer or covering to prevent infections while maintaining flexibility and comfort for patients. The material is typically made from synthetic polymers like polypropylene or polyester, processed through techniques such as spunbond or meltblown to achieve the desired properties of durability, liquid resistance, and low lint generation. Its non-woven structure allows for controlled permeability, making it suitable for medical applications where hygiene and fluid management are paramount.
