Report Overview

Perlite Fire Door Core Board is a specialized construction material designed for use in fire-rated doors. It is a composite board that utilizes perlite, a naturally occurring volcanic glass, as its primary core material. Perlite is known for its lightweight, insulating properties, and its ability to expand when heated, creating a barrier against heat and flames. The board is engineered to provide enhanced fire resistance and thermal insulation, crucial for maintaining the integrity of fire doors during emergencies. It is typically sandwiched between two layers of dense materials, such as gypsum or cement, to form a robust and durable structure. Perlite Fire Door Core Boards are used in the manufacturing of fire doors to meet specific fire safety standards and codes, ensuring that the doors can withstand a certain amount of heat and time before failing, thereby providing a critical barrier against the spread of fire and smoke in commercial and residential buildings.
