Abstracts

Modular, or prefab buildings are made out of components that are prefabricated off-site and then assembled at the construction site. This building method is a greener, smarter and faster way to build with less waste and more recycling. There are many benefits to using a modular building - Modulares create less waste as they are recycled, are environmentally sound, and can be built and installed quickly and for less money than a permanent structure. Because permanent modular structures are intended for longer use, they are typically constructed with wood, steel, and/or concrete. Temporary buildings, on the other hand, are usually made of wood to make them lightweight and easier to transport and reinstall.

The global Permanent And Temporary Modular Building market size was estimated at USD 11250.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
