## Abstracts

Laser equipment is mainly used for P1, P2, P3 laser scribing and P4 laser edge cleaning in perovskite preparation. 1) Laser scribing: During the preparation process of perovskite modules, the purpose of laser scribing P1, P2, and P3 is to divide the perovskite battery into multiple sub-cells. The metal electrode of the previous battery is different from the metal electrode of the subsequent battery. ITO is connected to form a series battery, thereby increasing the voltage; 2) Laser edge cleaning: There are differences in the various levels of printing or coating during the production of perovskite cells. Use laser etching to clean out an area of 1-10mm on the edge to ensure Consistency at all levels.

The global Perovskite Cells Laser Etching Equipment market size was estimated at USD 285.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 22.45% during the forecast period.
