Abstracts

Polymer processing additives refer to a category of substances added during the processing of polymers. Meanwhile, PFAS-free polymer process aid masterbatches are those in which the formulation does not contain perfluoro and polyfluoroalkyl substances (PFAS). These compounds are diluted, typically using polyethylene as the carrier to produce polyethylene particles with a specific compound content. These particles are added during the product processing stage to reduce melt viscosity, increase production yield, and prevent melt fracture and die lip build-up. Furthermore, they can impart certain special functions to the polymers, such as anti-slip and anti-blocking properties, to meet diverse application requirements. They can serve as alternatives to pure fluoro-based PPA.

The global Pfas Free Polymer Process Aid Masterbatches market size was estimated at USD 185.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
