Report Overview

Pharma grade polydimethylsiloxane (PDMS) is a high-purity silicone oil widely used in the pharmaceutical and medical industries due to its exceptional biocompatibility, thermal stability, and inertness. It serves as an excipient in drug formulations, a lubricant in medical devices, and a key component in topical treatments, controlled-release systems, and antifoaming agents. The strict regulatory requirements for purity, consistency, and low toxicity make pharma grade PDMS distinct from industrial-grade variants, ensuring its suitability for applications requiring direct human exposure. Its versatility and safety profile have solidified its role in critical pharmaceutical processes, including tablet coating, vaccine production, and implantable device manufacturing. The market for pharma grade PDMS is driven by increasing demand for advanced drug delivery systems, expanding biopharmaceutical production, and stringent quality standards in healthcare applications.
