Report Overview

Pharmaceutical grade titanium dioxide pigment is a high-purity, finely milled white pigment used primarily as an opacifying agent in pharmaceutical formulations such as tablets, capsules, and coatings. It meets stringent regulatory standards set by agencies like the U.S. FDA and European Pharmacopoeia, ensuring minimal impurities and consistent particle size distribution for optimal opacity, stability, and biocompatibility. Unlike industrial-grade titanium dioxide, which may contain contaminants, the pharmaceutical variant undergoes rigorous purification processes to eliminate heavy metals, residual solvents, and microbial content, making it safe for ingestion and medical applications. Its inert nature, high refractive index, and UV-blocking properties also contribute to its widespread use in sunscreens, ointments, and other dermatological products. The demand for this specialized pigment is driven by its critical role in enhancing product aesthetics, improving dosage accuracy, and ensuring compliance with global pharmaceutical safety standards.
