## Abstracts

Pharmacy operating software is a comprehensive management information system designed for retail pharmacies, chain pharmacies, and medical institution pharmacies to improve operational efficiency, ensure regulatory compliance, optimize inventory, and enhance patient services. The rapid development of pharmacy operations software is primarily driven by tightening drug regulatory policies and the need for digital transformation. With stricter controls on prescription drugs, especially specialty medications, pharmacies urgently need to implement information systems to achieve drug traceability, expiration date management, and compliant sales to meet regulatory requirements and mitigate risks. Furthermore, the expansion of chain operations and intensified industry competition are driving pharmacies to leverage software to optimize inventory management, reduce operating costs, and improve service efficiency.
