Report Overview

Phenylethyl alcohol (PEA) is an aromatic alcohol with a rose-like odor, widely used in the fragrance and flavor industry due to its pleasant scent and stability. It is a key ingredient in perfumes, cosmetics, and personal care products, as well as a flavoring agent in food and beverages. The compound also has antimicrobial properties, making it valuable in pharmaceuticals and disinfectants. The market for phenylethyl alcohol is driven by growing demand in the beauty and personal care sector, particularly in premium and natural fragrance formulations. Additionally, increasing consumer preference for synthetic aroma chemicals over natural extracts due to cost and supply chain stability further supports market growth. However, regulatory scrutiny on synthetic ingredients and competition from bio-based alternatives could pose challenges. Geographically, North America and Europe dominate consumption due to well-established fragrance industries, while Asia-Pacific is experiencing rapid growth fueled by rising disposable incomes and expanding cosmetics markets.
