Report Overview

Phenyltriacetoxysilane, also known as 3-phenylpropyltrimethoxysilane or γ -phenylpropyltrimethoxysilane, is an organosilicon compound with the chemical formula $C_{12}H_{18}O_3Si$. It is a colorless to pale yellow liquid at room temperature and is soluble in common organic solvents. Phenyltriacetoxysilane is primarily used as a coupling agent in the production of composite materials, particularly in the rubber and plastics industries. It functions by forming covalent bonds between the organic polymer matrix and inorganic fillers, such as glass fibers or silica, thereby enhancing the mechanical properties and durability of the composite materials. Additionally, it can be used as a cross-linking agent in the synthesis of various organosilicon polymers and as a silylating agent in organic synthesis. The product is typically supplied in a sealed container to prevent moisture and air exposure, which can lead to hydrolysis and subsequent polymerization.
