## Abstracts

Phosgene derivatives are chemical compounds derived from phosgene ( $\text{COCl}_2$ ), a toxic gas historically used in chemical manufacturing. These derivatives often contain carbonyl ( $\text{C}=\text{O}$ ) and halogen ( $\text{Cl}$ ) functional groups, making them valuable intermediates in organic synthesis. The global demand for phosgene derivatives is steadily increasing, driven by their essential applications in pharmaceuticals, agrochemicals, and specialty chemicals. The pharmaceutical sector, in particular, is a significant contributor due to the rising need for advanced intermediates. The industry faces stringent regulations due to the toxic nature of phosgene. Compliance with safety standards is crucial, which can impact production costs and timelines. However, manufacturers are investing on synthesis methods and technologies, which can lead to the development of more efficient production processes.

The global Phosgene Derivatives market size was estimated at USD 7352.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
